# SPRING CLEANING

## for Energy Efficiency

### **Air Conditioner Filters:**

Keep them clean or replace them regularly to maintain airflow and prevent your unit from overworking.

### **Refrigerator Coils:**

Dust them off to help your fridge dissipate heat more efficiently and save up to 25% on energy. Consult your refrigerator's user's manual for the best and safest way to clean the coils.

### **Ceiling Fan Blades:**

Clean them to prevent motor strain and adjust rotation direction for seasonal comfort. Use a pillowcase to capture dust and keep your fan running smoothly.

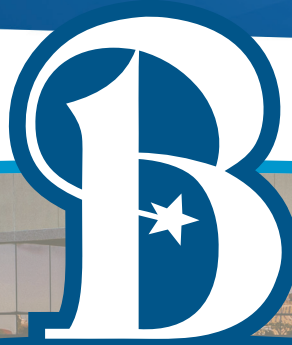

### **Unplug Electronics When Not in Use:**

Not only are multiple cords and plugs unsightly, standby power consumption can add up. Unplug devices or use power strips to easily disconnect multiple electronics when they're not in use.

**Use your spring cleaning goals to maximize energy efficiency throughout your home.**

ADMISSION IS FREE!

CITY OF BRYAN  
OPEN HOUSE

Your keys to the city.

Thursday, April 4

11 a.m. – 1 p.m. | Legends Event Center

Join us at our come-and-go event to:

CONSERVATION TIPS

Energy Conservation Tip:

Replace your old thermostat with an ENERGY STAR® certified programmable thermostat. By controlling your heating and cooling times, it will pay for itself in less than 12 months.

Water Conservation Tip:

When planting a new landscape, create areas with different hydrozones depending on sun/shade exposure, soil and plant types, and types of sprinklers. Be sure to adjust your irrigation system or watering schedule based on those zones' specific needs. This helps you avoid overwatering some areas or underwatering others.
